

Protocol errors in clinical trials can be disastrous.

Reduce your risk of delays using simulation training and assessment with TheraSim CT

TheraSim™
reducing risk by reducing errors

Reduce protocol violations through simulation

With TheraSim CT Investigators, study monitors and CRAs run through the protocol in an interactive, online, simulation system.

They process simulated study subjects through the protocol and TheraSim captures and corrects any protocol violations.

After making mistakes in a consequence-free environment, they are much less likely to make mistakes in the actual study.

Global Experience and Reach

TheraSim has a proven track record of reducing errors in clinical decision making. 140,000 doctors in 180 countries have used TheraSim in 35 therapeutic areas. Doctors prefer our system to traditional training. Its faster, self paced and closer to what they do in practice.

With TheraSim CT, your sites are supported throughout the study to reduce error, costs and remediation-time.

What keeps you up at night?

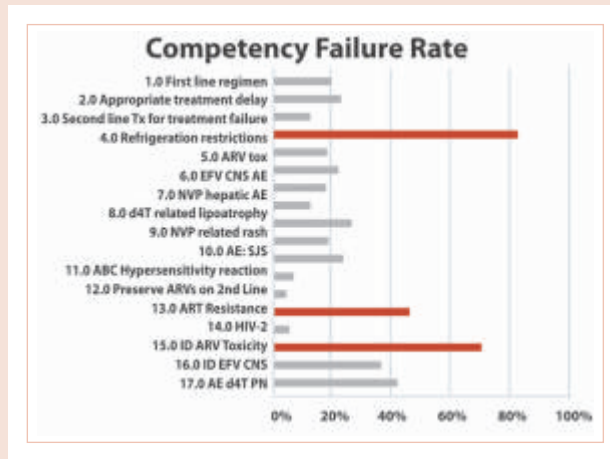

Use TheraSim simulations to solidify the tricky aspects of your study that keep you up at night:

Screening: Test the ability of screeners to accurately enroll patients by using simulations of study subjects they should and should not include.

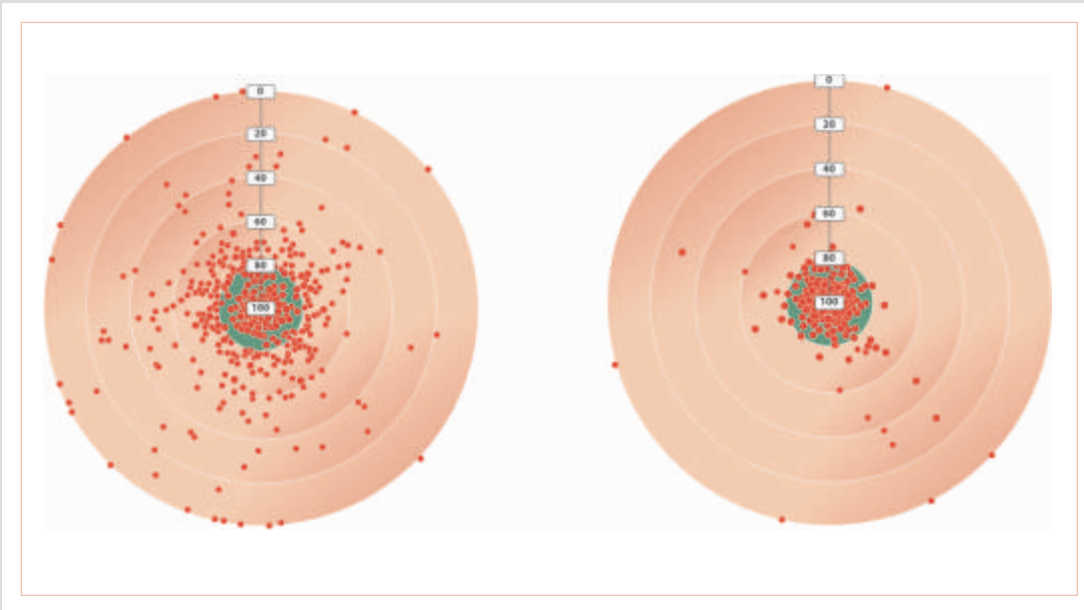

Rater Training: Reduce the inter-rater variance in applying CNS rating scales.

Delivery of the Study Drug: Investigators can practice dosing and prescribing the study drug and concomitant medication, as well as practice AE management.

Efficacy: Ensure that investigators and their staff can use labs, ratings and other procedures to properly to assess the full impact of the study drug.

Continuous Metrics that Predict Error – so you can avoid it

Use TheraSim CT to reduce protocol errors by looking for skill gaps in your investigators, CRAs, data monitors, etc and correct the gaps before the deviations can occur.

TheraSim CT is risk prevention.

Keep your study on time, on track and on budget...

- **On Time:** TheraSim is an online simulator that can be used any time and any place increase your training compliance.
- **On Track:** TheraSim priorities, measures, tracks and remediates specific clinical skills gaps that may impact your study's success.
- **On Budget:** On-line training reduces travel costs, staff requirements and most importantly reduces costly errors.

TheraSim simulations can be used to measure and improve performance for any aspect of your study that keeps you up at night

Performance \Area		Ave Simulations Required	Ave Price
Screening	the ability of screeners to accurately enroll patients by using simulations of study subjects they should and should not include	4	\$ 15,000 / simulation
Rater Training	Reduce the inter-rater variance in applying CNS rating scales	3	\$ 18,000 / simulation
Delivery of Study Drug	Investigators can practice dosing and prescribing the study drug and concomitant medication, as well as practice AE management	3	\$ 18,000 / simulation
Efficacy	Ensure that investigators and their staff can use labs, ratings and other procedures to properly assess the full impact of the study drug.	2	\$ 18,000 / simulation
